

GOOD PRACTICES 2020

Commitment to photovoltaic energy

In 2020, Grupo Antolin went a step further in its environmental responsibility and commissioned **four new photovoltaic facilities**, one at its headquarters in Burgos and the rest at three centers in India (Pune, Maharashtra, Chakan and Chennai), with an installed capacity of **1,350 kW** for self-consumption.

These facilities have contributed significantly to **reducing the company's carbon footprint** in 2020: they have generated 1,347 MWh, about 8% of the total consumption of the centers involved, and have avoided the emission of 576 tons of CO₂.

With the facility at the headquarters, Grupo Antolin is progressing in its goal to turn it into a sustainable building. Equipped with a pioneering photovoltaic facility since 2007, in the last four years the building has seen improvements to its energy efficiency, such as the use of LED technology in the lighting system, the reuse of water in the cooling towers and the installation of a heat energy recovery system.
